

Summary

As a passionate freelancer, I keep up with the latest trends and innovations of emerging technologies. Given my broad skills, constant awareness and experience with internet, I would prove to be a valuable asset to any IT organisation.

Technical Skills

Operating Systems; Mac OS X, Linux(Ubuntu/Debian), Windows 95...
Programming Languages; Ruby(Rails), Delphi, ASP, .Net/ASP.NET, Php, Perl
Databases; MsSql Server, MySQL, MsAccess
Miscellaneous

- MVC frameworks
- TDD/BDD: Cucumber/Rspec
- Git and Subversion
- Testing; Unit, Webrat, Selenium
- Visual Studio 2008/2010
- Linq
- Xml/Xslt
- Haml/Sass
- Ajax, jQuery, Prototype, AngularJS
- XPO from DevExpress
- ExtJs from Sencha

Experience

May/04 – present **Web Developer** SyLOW Web Development, Alkmaar
I am developing websites and working as a contractor for several companies, with web designers.

Fitmo *Rails/Postgre*
This is an online platform facilitating personal trainers to connect to their clients and create trainings and track them.

We have been using heroku and

- Backbone.js
- Responsive design
- Resque
- Redis

Our platform have API for fronted and for Mobile devices, we were able to separate business logic from front-ends

Govannon *Rails/MySQL*
We are working on mobile websites at Govannon. We build APIs to connect to

- Payment providers
- Content providers
- Traffic providers

We have started also building APIs so we are able to create shell websites connecting our core app. We use wide variety of technologies in addition to core Ruby and Rails; Redis, Sphinx...

We run our system in several countries and it supports multiple languages.

Center Parcs / Pierre Vacances *Rails/Java/MySQL*
It was a migration project and I was the lead developer in creating test suite for web service so P & V could do booking for Center Parcs on their website. We use *Rails 3* with *MySQL* for this project and I also implemented scripts in *SoapUI*.

Crkbo www.crkbo.nl

ASP.NET/MsSQL

Beloningsmonitor.nl (front-end) www.debeloningsmonitor.nl

Hr-Select (front-end) www.hr-select.nl

Convoy www.convoy.nl

I have built these websites using Asp.net(C#). They share some functionalities so I categorised them together. My responsibilities and technologies I used were;

- Built CMS for Admins and Members.
- Built membership system.
- Used MVC framework to separate content from business logic, I used XPO ORM mapper.
- IIS modules(Rewrite) for SEO friendly urls.
- Web service implementation to collect data from 3rd parties.

AfricaUnsigned.com www.africaunsigned.com

Rails/MySQL

Actually this is a sister project of Sellaband.com. When I was working at Sellaband one of the founders decided to have his own project for African music bands and a developer created a framework (simplified version of Sellaband) and I helped him to implement some business models. After I left Sellaband, they contacted me to add few functionalities and fix bugs. We use [Rails 2.3](#) with [MySQL](#) for this project again.

Trust Id www.trust-id.nl

Rails/MySQL

I have built reporting tool so we can follow user's states, and statistics. I have also integrated a simple ticketing system as well. Also I built billing/invoicing solution for the clients.

Sellaband.com www.sellaband.com

Rails

When I joined Sellaband.com development team, they were working to convert code base from a Ruby framework to RubyOnRails framework with new feature set and less bugs. I worked with them over 6 months from image processing to payment processing, download security, site optimisation and database optimisation. We use [Rails 2.3](#) with [MySQL](#) for this project. It has huge number of members and hits, working on multiple web and database servers.

Spot Fashion www.spotmyspots.com

Rails

I have developed a fashion portal where visitors can see collections and locate where they can buy these collections. I created an API for [SugarCRM](#) so shop and collection information were coupled with Sugar database. I designed the database (from client's specs) and system. Then I developed it in [Rails 2.0](#) with [MySQL](#). It is served with [Passenger](#) and [Nginx](#) and I am also working as a system administrator for this project.

VisiWeb www.bakkerspees.nl

ASP.NET

I have worked on both versions of VisiWeb (v1.0 & v2.0). Client have already a windows application that he was selling to his clients and they asked me to develop a web version of it but trick was to keep user interface look like a windows application. I developed VisiWeb with [ASP.NET\(C#\)](#). My clients team developed a *web service* to keep business logic isolated from both windows version and web version. I used [xml/xslt](#) heavily for this project, and off course www.extjs.com libraries made user interface not different from a windows application.

Opleidingen Monitor www.opleidingenmonitor.nl

ASP.NET

I have developed this web site in .NET using MsSQL Server database for a client. I worked with Satellite Software on this project. I developed the site using [MVC framework](#) to separate business logic from views. Also as DAL layer I worked with [SubSonic](#) so SQL queries did not clutter the code.

Cedeo.nl www.cedeo.nl

Rails

I build Cedeo website with [Rails 2.0](#) and [MySQL](#). I also developed CMS for backoffice to edit content of the site. It supports multiple language and multiple domains; www.cedeo.eu and www.cedeo.be. Organisations have been synchronised with CSV files

from backoffice. I helped the setup of the website for production. It works on *Passenger* with *Apache*.

De Belonings Monitor www.debeloningsmonistor.nl *Php*
I worked on this project with Satellite Software, they did project management and communication with client and writing specs for the project. I used *Php* and *MySQL* for the project with *Ajax*.

Unico Components Ltd. www.unico.uk.com *Rails*
Unico is a 35yrs old company located in UK. I worked with a web designer from UK on this project. After he delivered me with user interface, I designed database and developed in *Rails 1.3*. It has standard functionalities of any *e-commerce* package, you can manage products, members and categories in backoffice and you can buy them from the website.

Ford Forums www.fordforum.com *Classic ASP*
It is a classic *ASP* development with search engine friendly urls used. I implemented it by using *IIS* hack. It worked out pretty good and solid.

Other projects

<input checked="" type="checkbox"/> www.mijnantiek.nl	Ruby/MySql
<input checked="" type="checkbox"/> www.FindInstructor.com	Ruby/MySql
<input checked="" type="checkbox"/> www.veldwerkwinkel.nl	Php/MySql
<input checked="" type="checkbox"/> www.the-models.net	Php/MySql

July/02 – July/05 **Web Developer** Hotel Concepts Licencing B.V., Wormer
I developed and helped migration of a Windows application to web by using ASP/Sql Server/Delphi and then moved it to ASP.NET (C#).
One of my projects was developing a multi-language reservation system, which can be easily customised using the tools that I have developed.

<input checked="" type="checkbox"/> www.lloydhotel.com	.Net/Xlm/Sql Server (reservation system)
<input checked="" type="checkbox"/> www.westcordhotels.nl	.Net/Xlm/Sql Server (reservation system)

July/99 – July/03 **System Developer** Elsevier Bedrijfinformatie, Den Haag
I developed Windows applications in Delphi/Sql Server in order to be used internally or to be sold (one of them is sold more than 10,000 copies). I have also developed an e-commerce website with my colleagues.

- www.elsevieroverheid.nl Asp/Delphi/Sql Server
- De 100 plus formulieren cd Delphi

Feb. /97 – Feb/99 **Software Developer** Hitit Bilgi Islem, Istanbul
I developed applications that use reporting tools (Crystal Reports) and reservation systems in Delphi.

Education

Sep./90 – Jan./97 **Computer Engineering and Information Science** Bilkent University, Ankara
